

Different SFH clusters at matched PHZ sSFR and mass
 $10 \leq \log M_{\star} \leq 10.5$; within-triplet spans: $\Delta \log \text{sSFR} \leq 0.10$, $\Delta \log M_{\star} \leq 0.15$, $\Delta z \leq 0.15$

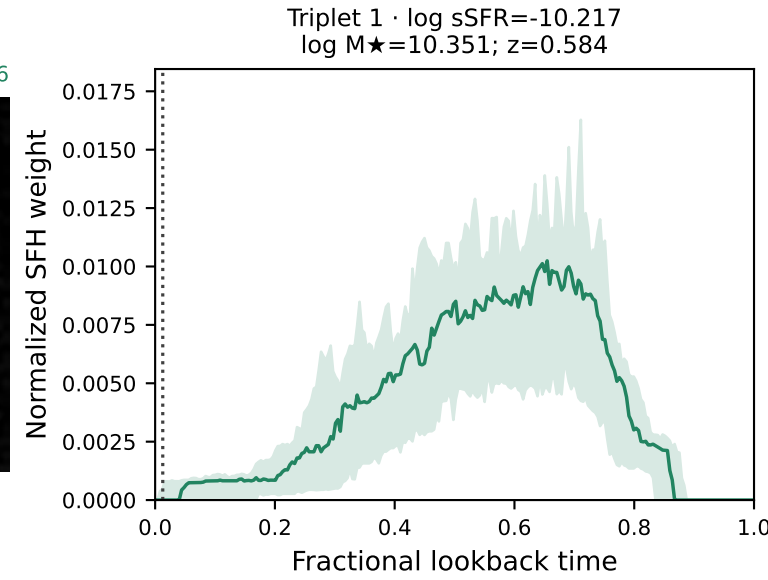

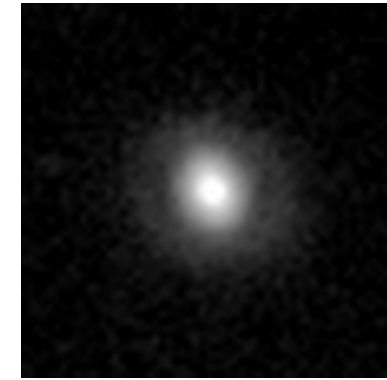

Cluster 1 · 2670617862646651188

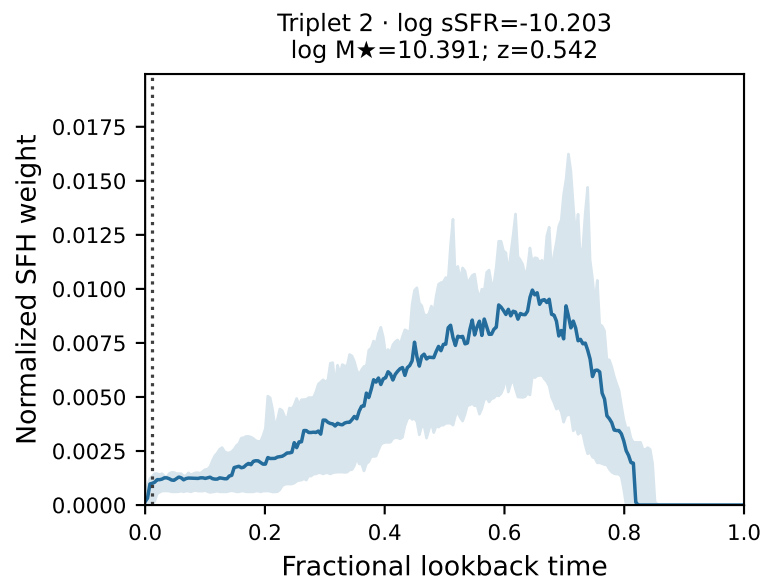

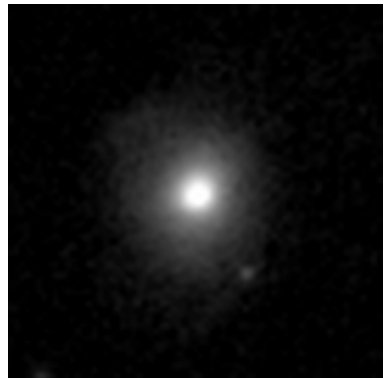

Cluster 2 · 2767794553658410291

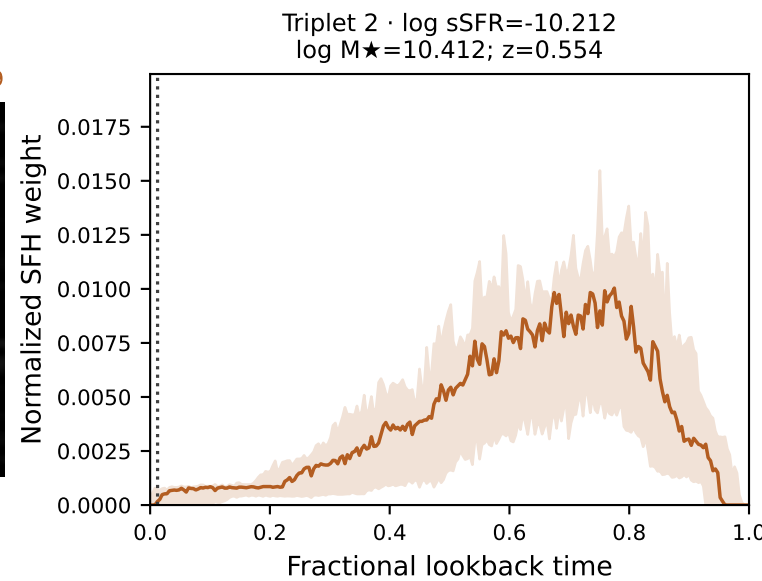

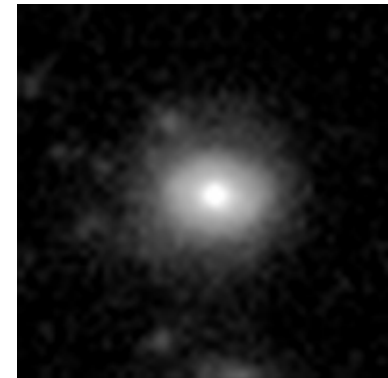

Cluster 3 · 2672673467680992226

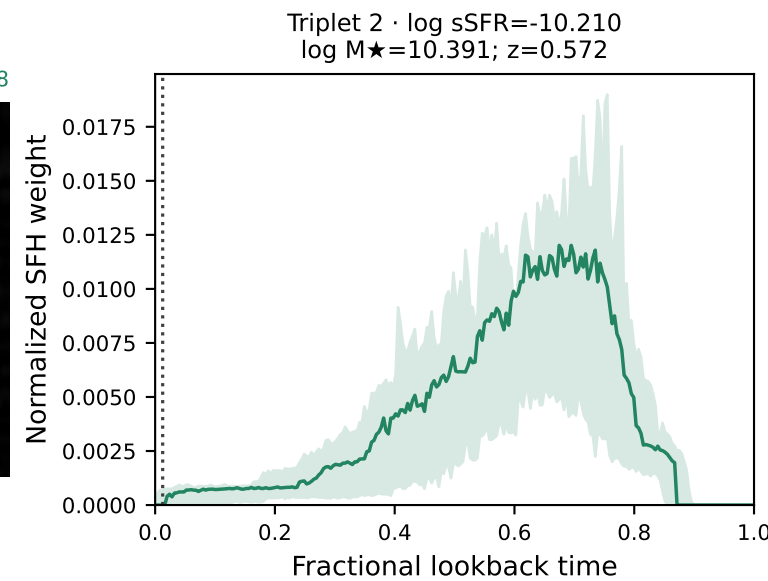

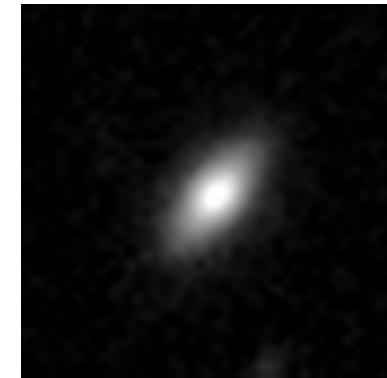

Cluster 1 · 2704619469641471138

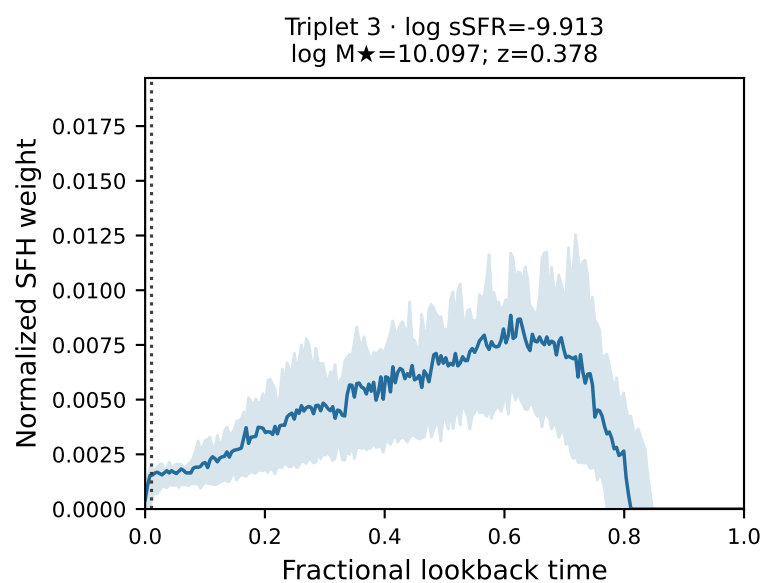

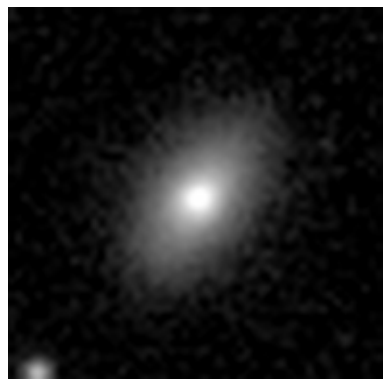

Cluster 2 · 2667769751684780339

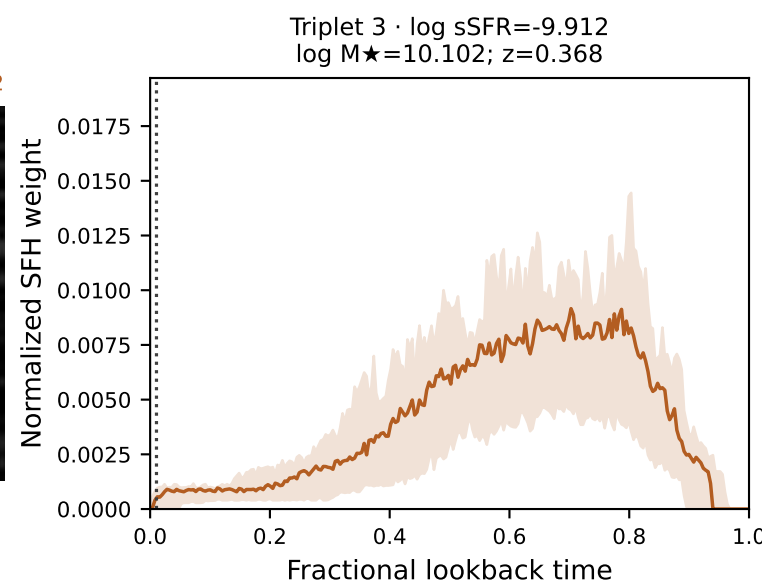

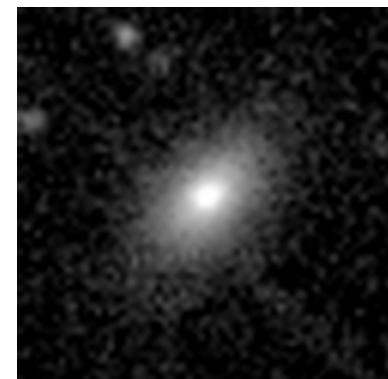

Cluster 3 · 2693723244638193608

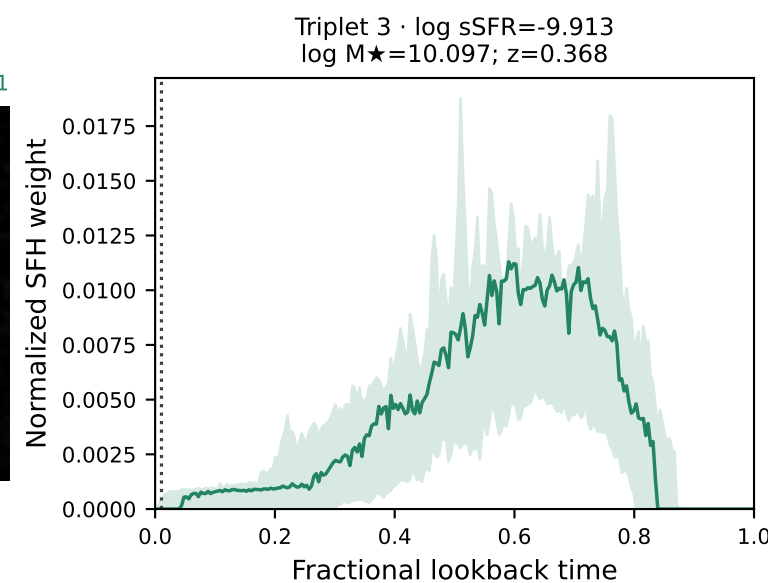

Cluster 1 · 2660887357685870847

Cluster 2 · 2764540011653008412

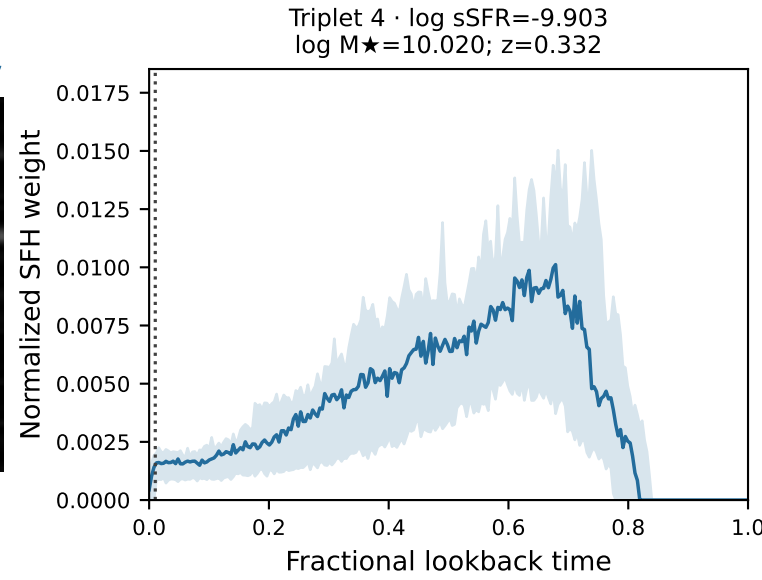

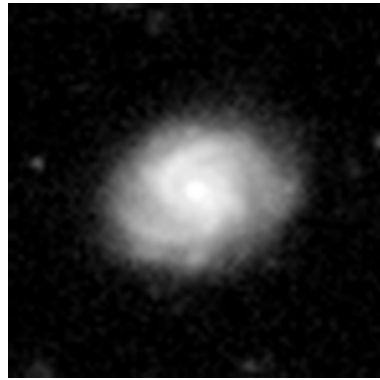

Cluster 3 · 2676181649678089711

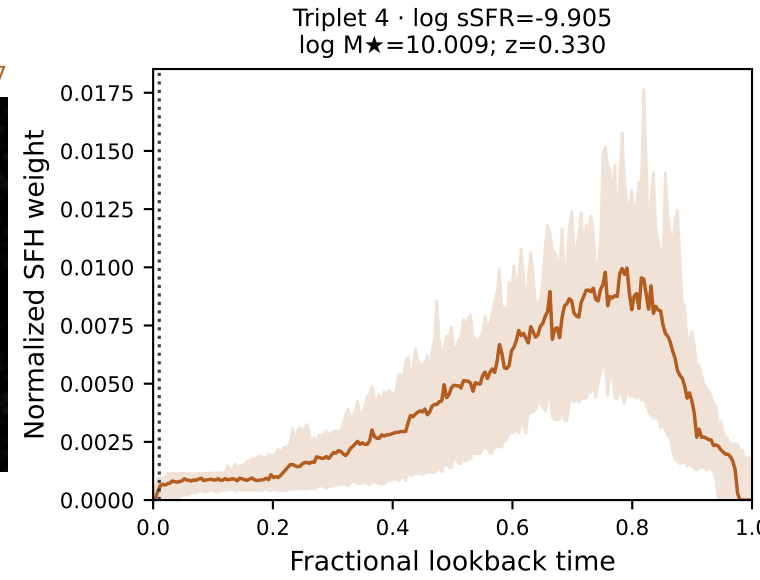

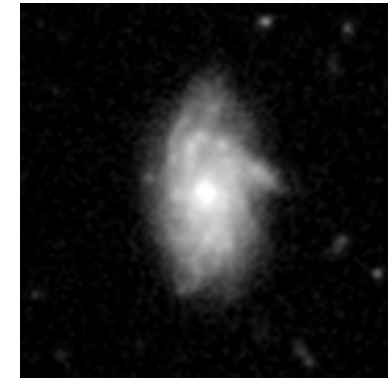

Observed VIS stamps · PHZ 100 Myr SFR / PHZ stellar mass, no MS correction · same SFH y-scale within each triplet
Dotted vertical line: 100 Myr before observation. Shading: pointwise SFH uncertainty. Examples selected for close matching.
